

# Warehouse Management IV (WM IV)

This case study explains the integrated warehouse management process of the physical inventory. A storage bin is checked by means of a continuous physical inventory.

#### **MOTIVATION**

Warehousing is of significant importance for logistics.

For a company, it is of central importance to know about the precise inventory quantities and inventory values of its warehouse complex. The warehouse management thus gathers all position outflows and inflows both quantitatively and qualitatively. Incorrect postings, shrinkage, and operational errors, however, might lead to stock differences.

In order to reveal missing quantities and differences and in order to gather physical stocks, the warehouse management draws on physical inventory.

#### **PREREQUISITES**

Before using this case study, you should be familiar with navigation in the SAP system.

In order to work through this case study successfully, it is not necessary to have finished the WM exercises although it is recommendable.

#### **Notes**

This case study uses the Global Bike (GB) data set, which was created exclusively for SAP UA global curricula.

# Process Overview

**Learning Objective** Conduct a physical inventory in the warehouse management.

Time 60 min

**Scenario** An internal security audit showed that, until now, there has been a mistake in the security concept. Through this mistake, unauthorized persons could have gained access to the pallet warehouse of the San Diego warehouse. For this reason, a continuous physical inventory will be conducted for all pallet warehouses that, according to the inventory control, contain materials and goods.

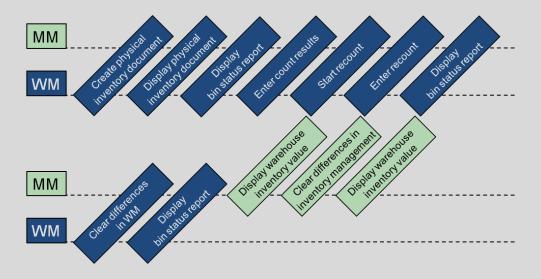

**Employees involved** 

Carolin Bruzik (warehouse foreman) Sunil Gupta (warehouse worker)

The basis of a physical inventory in the SAP S/4HANA Warehouse Management is a system inventory record. In contrast to the sample-based physical inventory, documents are created directly when performing the continuous physical inventory because of the low number of storage bins that have to be checked. The affected storage bins are earmarked for counting and a status is set against the storage bin. In the next step, the activation of the physical inventory document causes the lock of all storage bins that are listed in the document but this can only be conducted if all outstanding transportation orders to the destinations have been completed beforehand. The lock can only be released after clearing the inventory - a manual release is not possible.

After the counting, the results have to be entered into the system. The same applies to any possible recounts. After the finalization of the physical inventory, the difference has to be cleared in the warehouse management system. Since the locked storage bins are released by clearing, this also applies if there are no differences.

Physical inventory is completed through the correction of the storage location stocks in MM inventory management. Thereby, not only the quantity difference is updated, but also the value difference.

### Step 1: Create and activate a physical inventory document

**Task** Create and activate a physical inventory document.

Time 5 min

**Short Description** Use the SAP Fiori Launchpad to create a physical inventory document

Name (Position) Carolin Bruzik (warehouse foreman)

To create a physical inventory document, use the app *Carry out Continuous Inventory*.

Fiori App

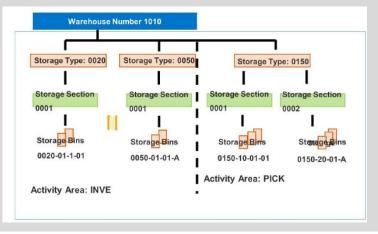

In the screen *Carry out Continuous Inventory*, enter **100** as Warehouse number, **002** as Storage type, **STBN-\***-### (do not forget to replace ### with your number) as Storage bin and **LEARN-###** as Name of counter. Also make sure that the value **Only bins not yet counted** is not selected (this also displays storage bins from completed inventories). Compare with the screen

below and confirm your entries with Execute or F8

STBN-\*-### LEARN-### Deselect Only bins not yet counted

**Note:** The warehouse number is the highest level of organizational unit in warehouse management. In practice, the warehouse number usually corresponds to a physical building or distribution center. Each warehouse number has a substructure that maps the spatial relationship in the warehouse complex in detail.

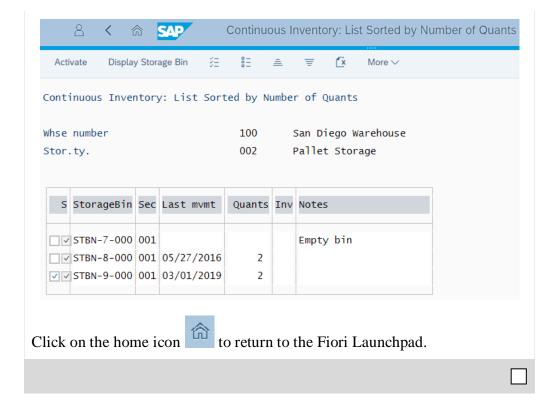

Storage bins are the lowest level of organizational structure. They are assigned to a storage type and a storage section (if one exists). Storage bins represent the physical location where the goods are stored in the warehouse.

8 <b>(</b> & <b>SAP</b>	Carry out Continuous Inventory

Only bins that can be counted:	7
Name of counter:	_

In the following screen, deselect all storage bins except for STBN-9-###.

Now click on Activate and thus create a physical inventory document. Through this process, the selected storage bins are blocked against stock putaways and stock removals.

STBN-9-###

# Step 2: Display physical inventory document

Time 5 min Task Display your physical inventory document. Short Description Use the SAP Fiori Launchpad to watch your physical inventory document. Name (Position) Carolin Bruzik (warehouse foreman) To watch your physical inventory document, use the app *Inventory* Fiori App Overview. Inventory Overview In the screen *Inventory Overview*, enter **100** as Warehouse number. Make 100 Execute sure that all other screens are empty and click Inventory Overview Save as Variant... Dynamic selections More ✓ \* Warehouse number: | 100 급 Physical inventory number: Use the name of counter in order to find and to select your physical Display Inventory inventory document. Click on Check the inventory status, the storage bin, and the count date. Press Statistics in order to see additional key figures of the inventory. to return to the Fiori Launchpad. Click on the home icon

# Step 3: Display bin status report

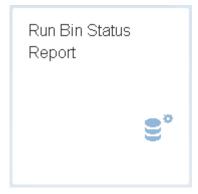

Task Check the status of your bin status report.

Short Description Use the SAP Fiori Launchpad in order to display the bin status report, which displays a detailed report of each storage bin within the specific warehouse.

Name (Position) Carolin Bruzik (warehouse foreman)

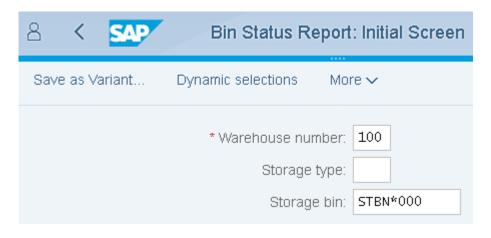

To display the bin status report, the app Run Bin Status Report

Fiori App

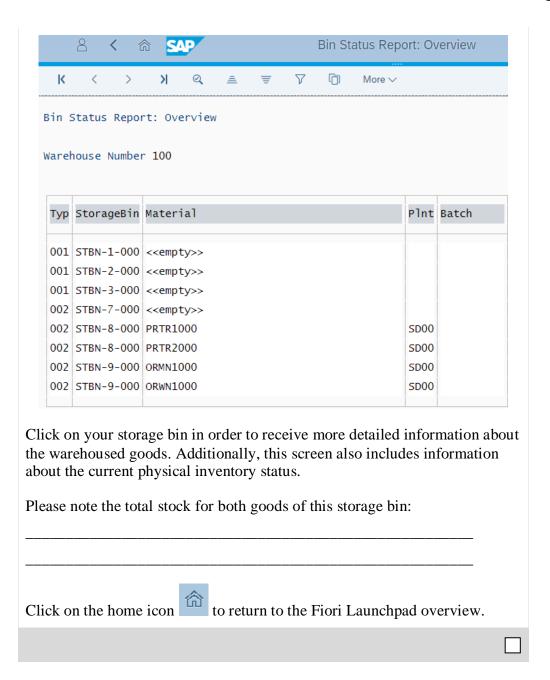

In *Bin Status Report: Initial Screen*, enter **100** (for the San Diego Warehouse) as Warehouse number and **STBN\*###** as Storage bin (do not forget to replace ### with your number). Press

100 STBN\*###

In *Bin Status Report: Overview* you should see that the storage bin **STBN-9-**### is filled. The screenshot below could be look different from your view.

STBN-9-###

### Step 4: Enter count results

**Task** Enter your count results in the S/4HANA System.

Time 5 min

**Short Description** Use the SAP Fiori Launchpad in order to enter your physical inventory document and the count information in the S/4HANA System in accounting terms.

Name (Position) Sunil Gupta (warehouse worker)

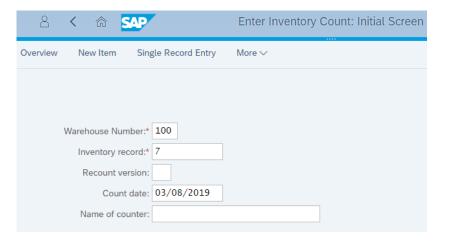

To enter your count results, use the app Enter Inventory Count.

Fiori App

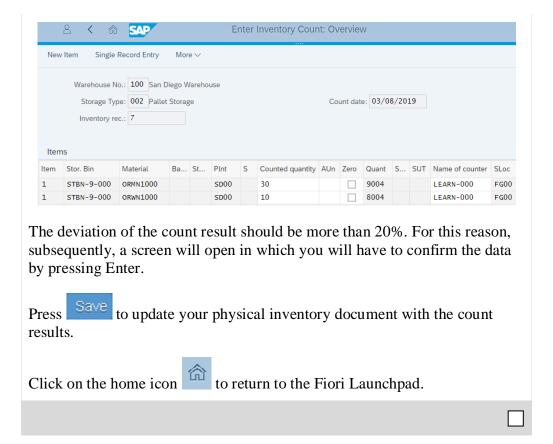

In the screen *Enter Inventory Count: Initial Screen*, enter **100** as Warehouse Number and **today's date** as Count date. Enter **your Inventory Record** number if it is not entered automatically. If you cannot remember your inventory record, please re-simulate the transaction of the previous step in order to find it. Press Enter to confirm your entries.

100 Your Inventory Record Number Today's day

In *Enter Inventory Count: Overview*, for the Material ORMN1###, **add 5 units to the value** of the previous step and enter this new value as counted quantity. For the Material ORWN1###, enter **the same value** which you have listed in the previous step. For both positions, please enter **LEARN-###** as name of counter. Press Enter.

ORMN1### Actual value +5 ORWN1### Actual value LEARN-###

# Step 5: Start recount

Task Start the recount.

Time 5 min

**Short Description** Use the SAP Fiori Launchpad in order to enter the data of the recount.

Name (Position) Carolin Bruzik (warehouse foreman)

In order to enter the recount, use the app *Start recount*.

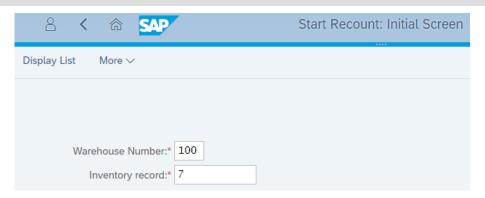

Fiori App

In the screen *Start Recount: Initial Screen*, the number of your **Inventory record** and **100** as Warehouse Number should already be listed. If they are not listed, please fill in the boxes. Click Enter.

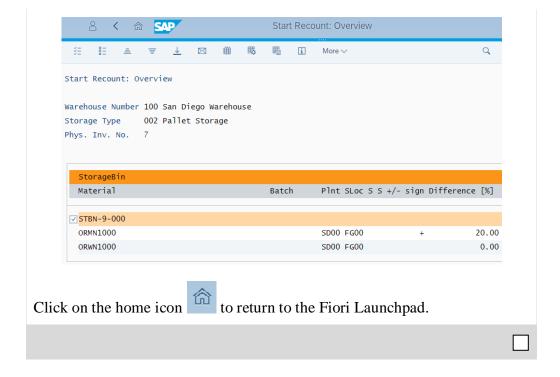

Inventory record

If you cannot remember the number of your inventory record, you can identify it once more as in the task *Display Physical Inventory Document*.

Make sure that your storage bin **STBN-9-###** is selected for the recount and start it by clicking Initiate Recount.

STBN-9-###

# Step 6: Enter recount

**Task** Enter the count results of your recount into the S/4HANA System.

Time 5 min

**Short Description** Use the SAP Fiori Launchpad to enter the count results into the S/4HANA System.

Name (Position) Sunil Gupta (warehouse worker)

To enter the count result of the recount, use the app *Enter Inventory Count*.

Fiori App

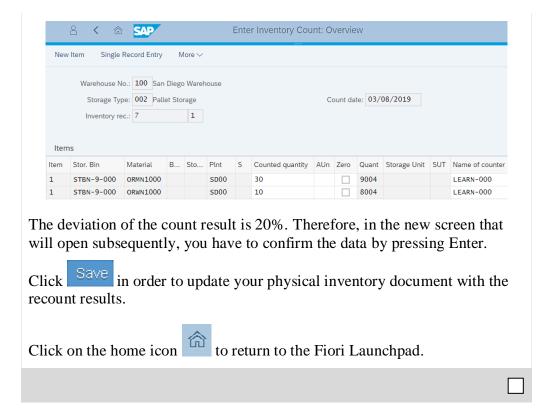

In the screen *Enter Inventory Count: Initial Screen*, enter **100** as Warehouse Number, **1** as Recount version and **today's date** as Count date. Please enter your **Inventory Record Number** if it is not listed automatically. Confirm your entries by pressing Enter.

100 1 Today's date Inventory Record

8	〈 命 💆	NP (	Enter Inventory Count: Initial Screen

	Name of cour	nter:	

In the screen *Enter Inventory Count: Overview*, enter **the same data** that was entered in the first count. Please enter **LEARN-###** as Name of counter for both positions. Press Enter.

Same as in the first count LEARN-###

# Step 7: Display bin status report

**Task** Check the status of your bin status report.

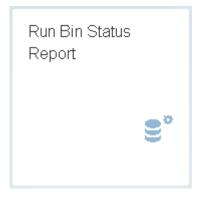

Time 5 min

**Short Description** Use the SAP Fiori Launchpad in order to display the bin status report that displays a detailed report of every storage bin within the specific warehouse.

Name (Position) Carolin Bruzik (warehouse foreman)

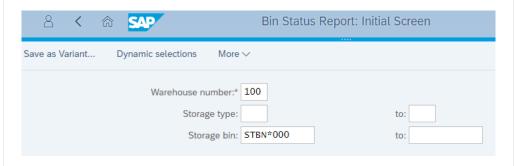

In order to display the bin status report, use the app Run Bin Status Report.

Fiori App

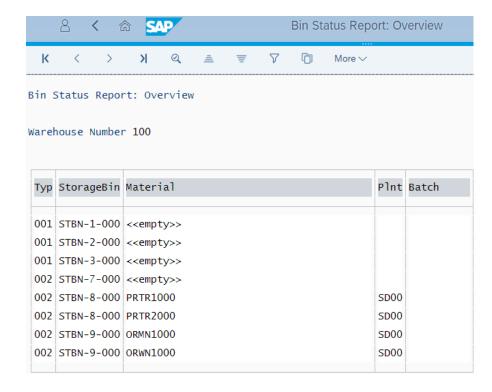

In *Bin Status Report: Initial Screen*, enter **100** (for your San Diego warehouse) as Warehouse number and **STBN\*###** as Storage bin (replace ### with your number). Click

100 STBN\*###

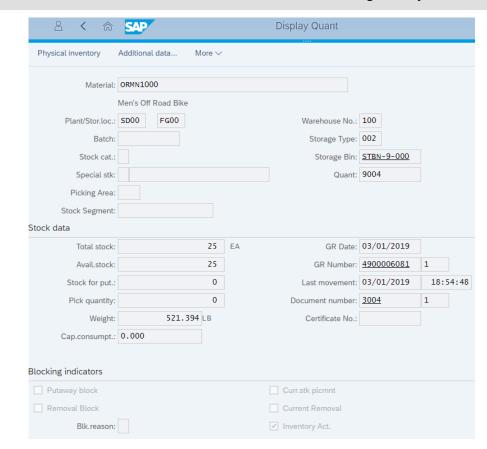

In *Bin Status Report: Initial Screen*, you should notice that the storage bin **STBN-9-**### is filled. The screenshot below could be look different from your view.

Click on your material in order to receive detailed information of this quant and check if the amounts have already changed.

**Note** As you can see, small adjustments have been made since the stock difference has not been booked into the warehouse management yet.

Click on the home icon to return to the Fiori Launchpad.

STBN-9-###

# Step 8: Clear differences in the warehouse management

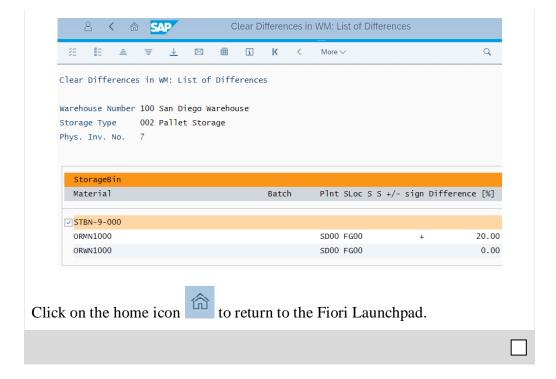

Time 5 min Task Clear the differences in the warehouse management. Short Description Use the SAP Fiori Launchpad in order to clear the stock differences within the warehouse management. Name (Position) Carolin Bruzik (warehouse foreman) In order to clear the differences, use the app *Clear Differences in WM*. Fiori App Clear Differences in WW. In the screen Clear Differences in WM: Initial Screen, the Warehouse Inventory record Number 100 and the number of your Inventory record should already be entered. If this is not the case, please enter the corresponding figures. Press Enter. Clear Differences in WM: Initial Screen SAP 命 Display List More ∨ Warehouse Number:\* 100 Inventory record:\* 7

© SAP UCC Magdeburg Page 19

In the list of differences, select your storage bin STBN-9-##. Afterwards,

Write Off

press

# Step 9: Display bin status report

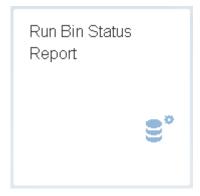

Task Recheck the bin status report.

Short Description Use the SAP Fiori Launchpad in order to watch the status of your bin status report. It will offer a detailed overview over each storage bin.

Name (Position) Carolin Bruzik (warehouse foreman)

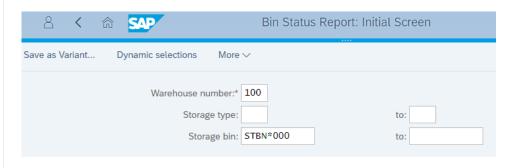

To display the bin status report, use the app Run Bin Status Report.

Fiori App

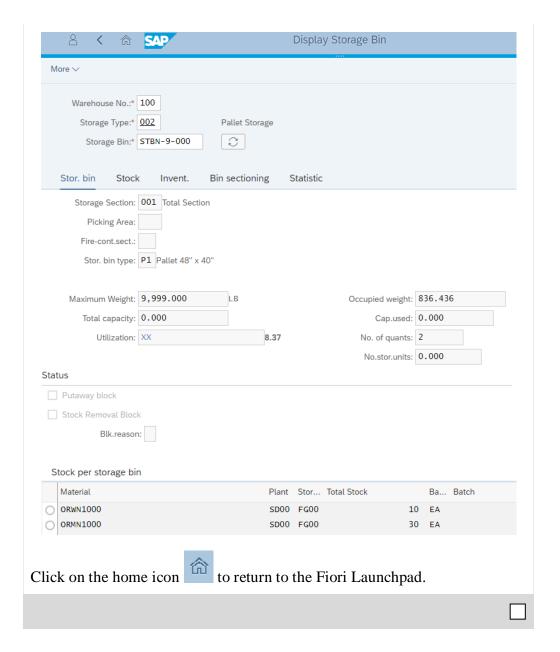

In *Bin Status Report: Initial Screen*, enter **100** as Warehouse number (for your San Diego warehouse) and **STBN\*###** as Storage bin (replace ### with your number). Click Execute.

100 STBN\*###

In the screen *Bin Status Report: Overview*, click on your storage bin **STBN-9-**### in order to get detailed information. Make sure if the amount of your ORMN1### was adjusted.

STBN-9-###

# Step 10: Display warehouse inventory value

**Task** Display the warehouse stock.

Time 5 min

**Short Description** Use the SAP Fiori Launchpad in order to watch the warehouse stock.

Name (Position) Carolin Bruzik (warehouse foreman)

In order to watch the warehouse stock, use the app Display Warehouse Stock.

Fiori App

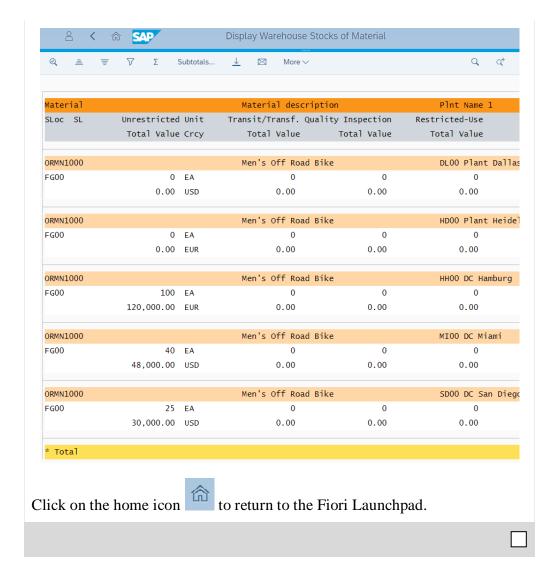

In the screen *Display Warehouse Stocks of Material*, enter **ORMN1**### as Material (replace ### with your number). Make sure that all boxes are empty and click Execute.

ORMN1###

Pay attention to the fact that the stock difference, although booked for the warehouse management, is not cleared for the inventory management yet. This becomes clear since the data for the distribution center San Diego displays the old stock quantity.

# Step 11: Clear the differences in MM inventory management

Task Clear the differences in MM inventory management.

Short Description Use the SAP Fiori Launchpad in order to clear the stock differences in the inventory management.

Name (Position) Carolin Bruzik (warehouse foreman)

In order to clear the differences in the inventory management, use the app *Clear Differences in Inventory Management*.

Fiori App

In the screen *Clearing of Differences in Inventory Management*, enter **100** as Warehouse number and **999** as Storage type. Press Execute.

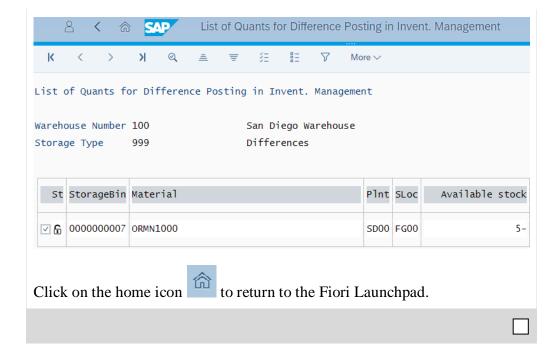

100 999

**Note:** Storage types are represented as a group of warehouse bins with similar characteristics. Storage types are defined on the basis of their spatial or organizational features.

In the screen *List of Quants for Difference Posting in Inventory Management*, select your Material **ORMN1**###. Make sure that no other elements are selected. Click Write Off.

ORMN1###

# Step 12: Display warehouse inventory value

Task Display the warehouse stock again.

Time 5 min

**Short Description** Use the SAP Easy Access Menu in order to see the warehouse stock.

Name (Position) Carolin Bruzik (warehouse foreman)

# In order to watch the warehouse stock, use the app *Display Warehouse Stock*.

Fiori App

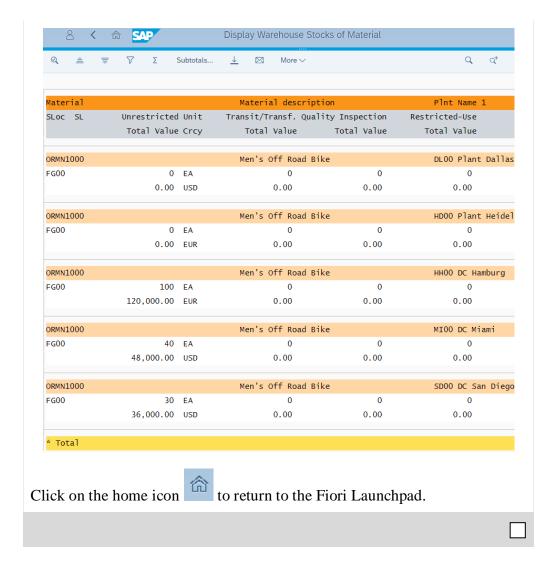

ORMN1###

In the screen *Display Warehouse Stocks of Material*, enter **ORMN1**### as Material (replace ### with your number). Make sure that all boxes are empty and click Execute.

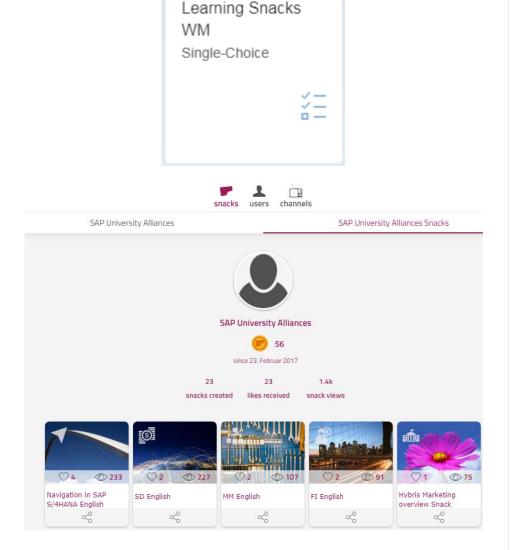

As you can see, the amount of material and the associated data in San Diego has increased.

# Learning Snacks

In order to test and consolidate your knowledge use the app *Learning Snack WM*.

Fiori App

You see all the snacks for the individual case studies. Select the Snack WM English and answer all nine questions.

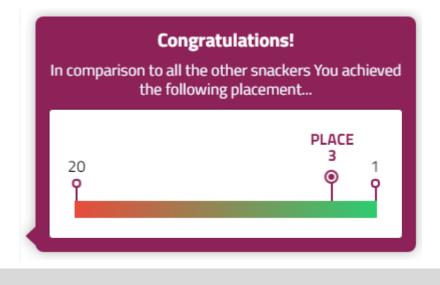

Learning Snack

#### Hint:

If you do not see any Apps, you need to change the language on the page Learning Snacks. Therefore click on the current language right next to *change language* and choose **English**.

When you have answered all the questions you will receive a success message and your placement.

#### Learning Objective Conduct a physical inventory.

Time 60 min

You have successfully gone through the Case Study *Warehouse Management IV*. Now you are able to demonstrate and to apply your knowledge. For this purpose, you should solve the following additional task on your own.

**Scenario** As a warehouse manager, you are in control of the necessary physical inventories within your warehouse. The San Diego warehouse applies the method of continuous inventory. In the course of this inventory, your aim is to check all storage locations of the storage type *pallet storage*.

In the course of the physical inventory of the storage bin STBN-9-###, which is listed as empty, 120 units of your off-road helmets (*OHMT1###*) are found in storage location *TG00*. Strict investigations revealed that they were part of the last delivery and were not entered into the system at all. The goods were also put away into the wrong storage bin, as STBN-3-### would be the standard bin for them. Start this physical inventory within the system, add the count and clear it.

To reconcile the stocks, use a transportation order in order to restore the 120 units from the storage bin STBN-9-### to the storage bin STBN-3-###.

**Task Information** You are free to use the Case Study *Warehouse Management IV* as an aid. It is however recommended to accomplish this advanced task without any help in order to thus put your acquired knowledge to a test.
